AX-IR FURNACE

The furnace AX-IR has been designed to accelerate the drying process that follows the gluing stages. It is an intelligent solution, able to modulate the power of the infra-red lamps to obtain a fast and optimal drying of the adhesive, reducing the use of energy to a minimum. The efficiency of the infra-red lamps drying furnace AX-IR is most advantageous when working just in time or when there is the need to pack, vacuum pack, roll and box the mattress, eliminating the times waiting for drying
